Patchly GOLD

PATCHLY TUTORIAL · 14 STEPS

Make your own stack

How do I make my own map setup?

A stack is a named set of map layers. This tour builds one from nothing, puts it on the favourites rail, then takes it back off, so the whole loop is familiar before you need it standing in a paddock.

01 Where stacks are managed
02 Favourites and the rest
03 The rail is full
04 Make one
05 Give it a name
06 Put it on the rail
07 Create it
08 Your new stack is active
09 Back to the hub
10 There it is
11 The star moves it
12 There it went
13 Now clear it away
14 That is the whole loop

Rather be shown on your own map?

Scan to run this tour inside Patchly. It is always there under Settings, then Help, then Tutorials.

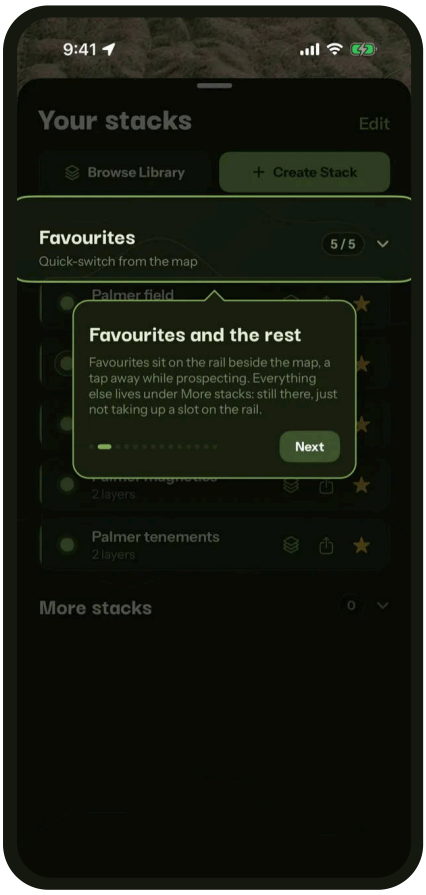

Step 1 of 14

Where stacks are managed

A stack is a saved set of map layers. This opens the hub, where they are made, renamed and removed.

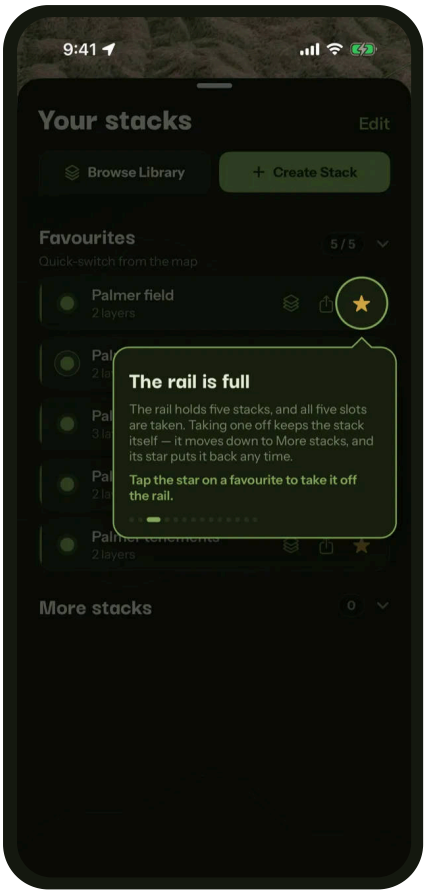

WHAT TO DO
Tap to open the stacks hub.

Step 2 of 14

Favourites and the rest

Favourites sit on the rail beside the map, a tap away while prospecting. Everything else lives under More stacks: still there, just not taking up a slot on the rail.

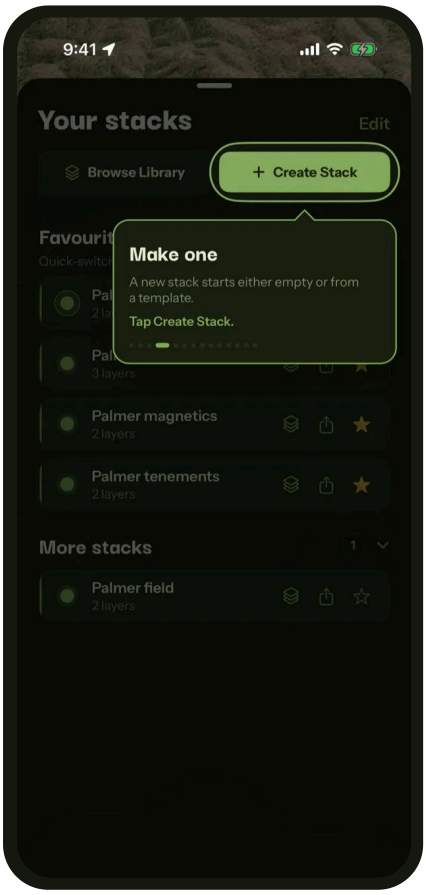

Step 3 of 14

The rail is full

The rail holds five stacks, and all five slots are taken. Taking one off keeps the stack itself — it moves down to More stacks, and its star puts it back any time.

WHAT TO DO
Tap the star on a favourite to take it off the rail.

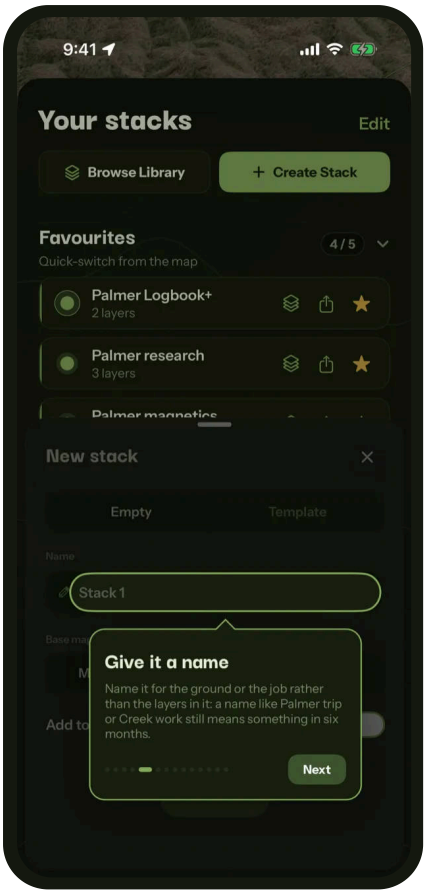

Step 4 of 14

Make one

A new stack starts either empty or from a template.

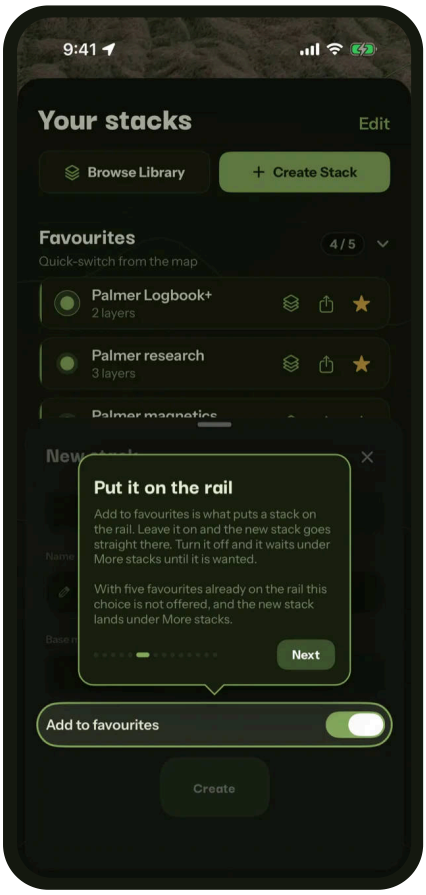

WHAT TO DO
Tap Create Stack.

Step 5 of 14

Give it a name

Name it for the ground or the job rather than the layers in it: a name like Palmer trip or Creek work still means something in six months.

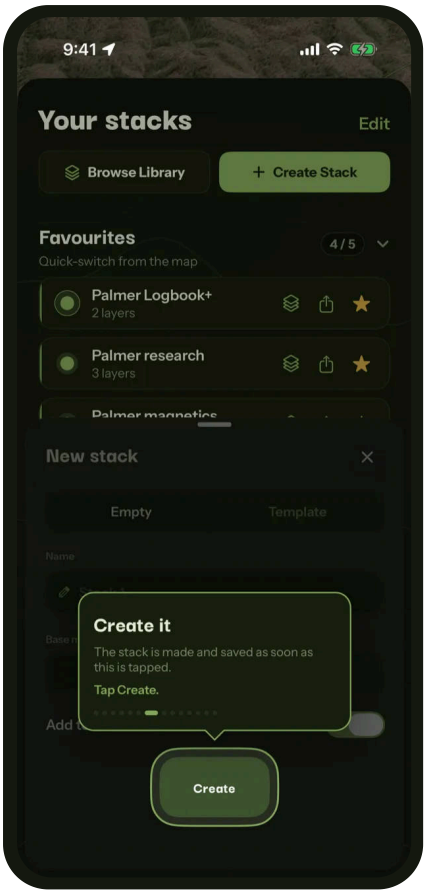

Step 6 of 14

Put it on the rail

Add to favourites is what puts a stack on the rail. Leave it on and the new stack goes straight there. Turn it off and it waits under More stacks until it is wanted.

With five favourites already on the rail this choice is not offered, and the new stack lands under More stacks.

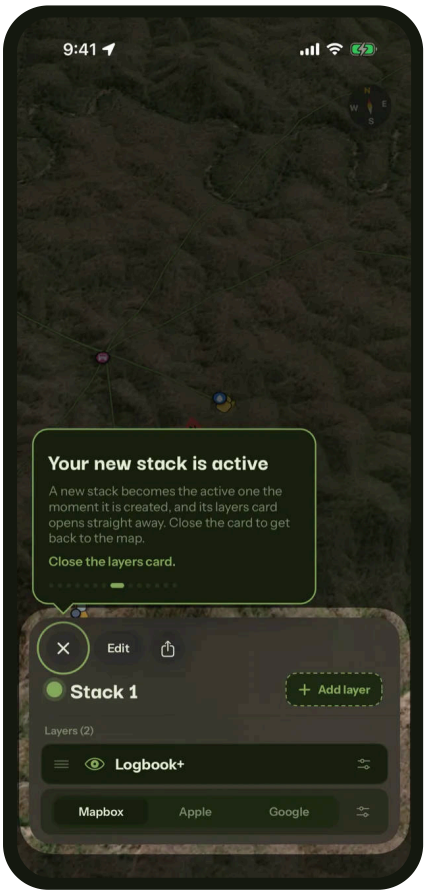

Step 7 of 14

Create it

The stack is made and saved as soon as this is tapped.

WHAT TO DO
Tap Create.

Step 8 of 14

Your new stack is active

A new stack becomes the active one the moment it is created, and its layers card opens straight away. Close the card to get back to the map.

WHAT TO DO
Close the layers card.

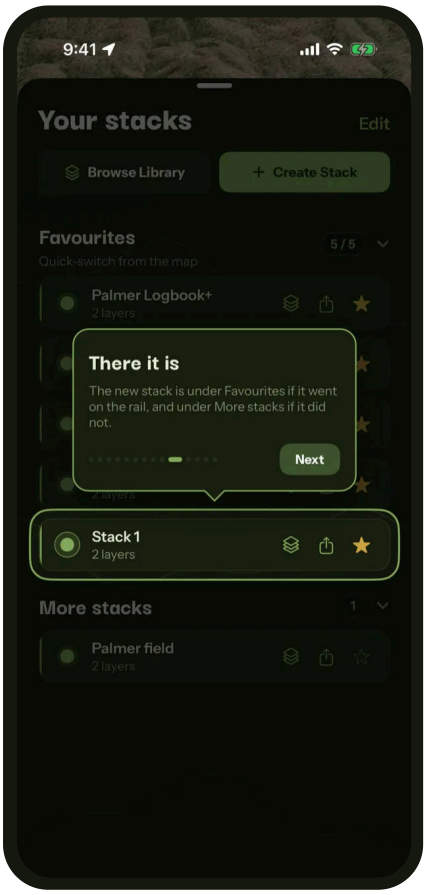

Step 9 of 14

Back to the hub

The rail is back, and with it the way into the hub.

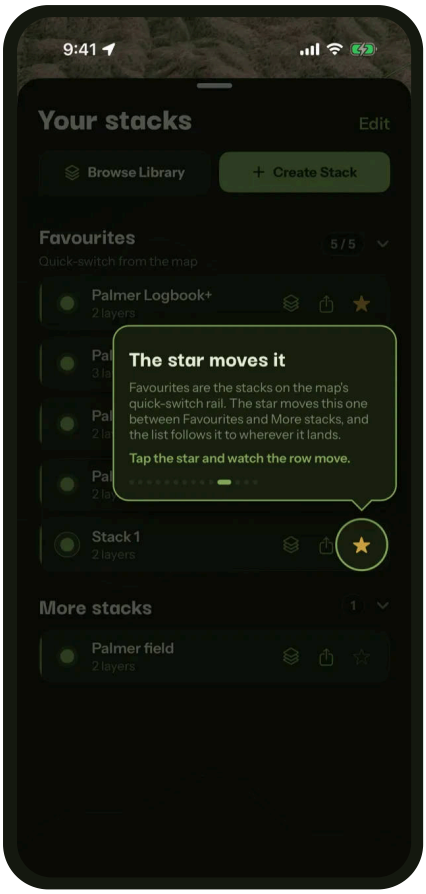

WHAT TO DO
Tap to open the stacks hub.

Step 10 of 14

There it is

The new stack is under Favourites if it went on the rail, and under More stacks if it did not.

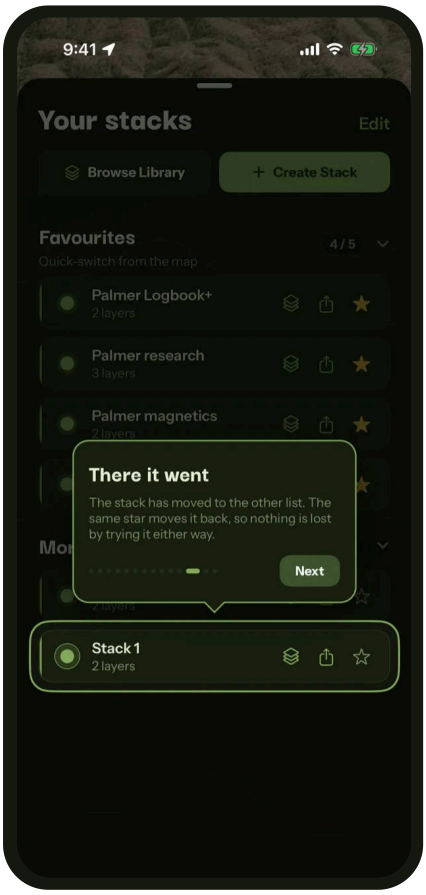

Step 11 of 14

The star moves it

Favourites are the stacks on the map's quick-switch rail. The star moves this one between Favourites and More stacks, and the list follows it to wherever it lands.

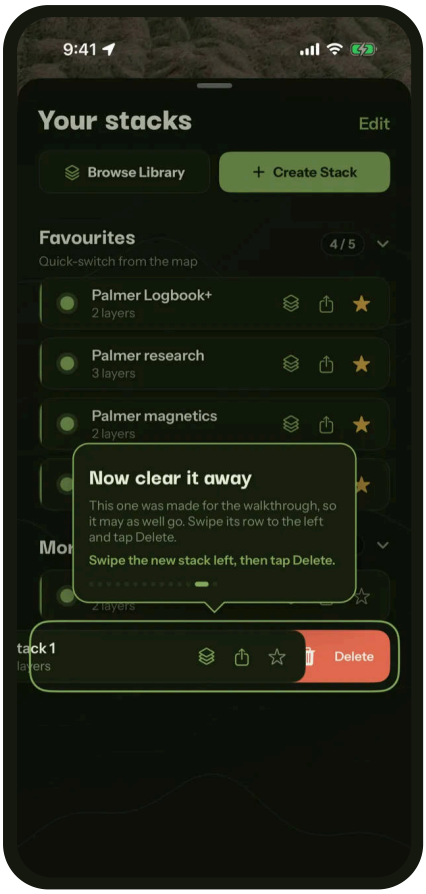

WHAT TO DO
Tap the star and watch the row move.

Step 12 of 14

There it went

The stack has moved to the other list. The same star moves it back, so nothing is lost by trying it either way.

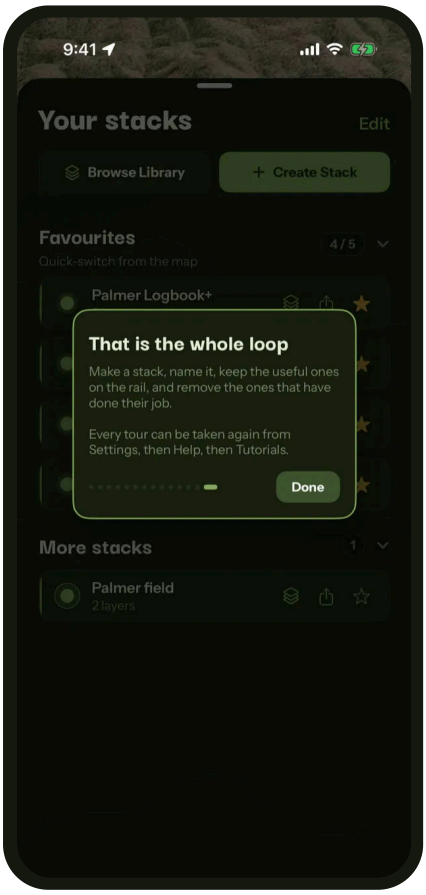

Step 13 of 14

Now clear it away

This one was made for the walkthrough, so it may as well go. Swipe its row to the left to remove it.

WHAT TO DO

Swipe the new stack left to remove it.

Step 14 of 14

That is the whole loop

Make a stack, name it, keep the useful ones on the rail, and remove the ones that have done their job.
